SUMMARY

Software Design graduate with production experience building full-stack systems (React, Node.js, TypeScript) and native iOS apps (Swift). Architected Revved Up (accessible fitness platform) backend serving 70+ users in production. Experienced in iOS development, system architecture, and full-stack engineering.

EXPERIENCE

Revved Up (Full-Stack System for Accessible Fitness Management) | Sept 2025 - April 2026 | [Live](#)

- Transitioned 70+ trainers from manual to automated program management by architecting TypeScript/Node.js backend with layered architecture (controller, service, repository), which led to successful production deployment.
- Prevented unauthorized access to sensitive program information by implementing role-based access control (RBAC) restricting feature access by user role (kinesiologists, trainers, students, participants), which led to secure data isolation through permission checks at service layer.
- Enabled 70+ participants to access workout programs online by configuring Azure production infrastructure with reverse proxy (port routing), SSL encryption, and SQLite persistence, which led to reliable uptime and secure data storage through deployment to official queensu.ca domain with comprehensive documentation.
- Ensured timely user communication by integrating email automation using Resend (session reminders, program notifications), which led to automated notifications triggered from service layer on program assignment and updates.

Lead Software Developer, Queen's Black Tech | Sept 2025 - May 2026

- Led React/TypeScript development for Queen's Black Tech website, designing and implementing core features (navbar, contact form, events page, teams page), which led to a platform connecting 100+ Black students within the tech community to events, and career opportunities.
- Mentored 2 interns with no prior coding experience on Git workflows and React best practices, enabling them to implement the footer component of the Queen's Black Tech website and contribute to the production codebase.

Digital Classroom Support Staff, Queen's IT Services | Sept 2025 - April 2026

- Resolved audio/visual and technical issues across 130+ classroom spaces to maintain classroom technology, ensuring instructor productivity and class continuity.
- Responded to live support calls during lectures to restore critical classroom technology and showed instructors efficient equipment usage, enabling classes to proceed as scheduled and improve teaching effectiveness.

Teaching Assistant, CISC101 (Intro to Programming) | Sept 2023 - April 2024

- Delivered Python workshop to 200+ students, creating clear explanations of core programming concepts (loops, functions, data structures) that enabled 50+ struggling learners to grasp fundamentals and successfully complete the course.
- Conducted personalized 1-on-1 tutoring sessions identifying misconceptions in student code logic and debugging approaches, which led to students progressing from zero programming knowledge to shipping their first Python programs.

PROJECTS

Spend Sight — iOS Finance App | [Website](#) • [GitHub](#)

- Designed native iOS receipt scanner (Swift, SwiftUI) with on-device OCR (Apple Vision) to automate expense extraction, which led to demonstrated proficiency in end-to-end iOS development through complete workflow from capture to visualization with Swift Charts.
- Implemented multi-view architecture (Scanner, Receipt List, Detail, Insights) with Core Data persistence enabling local data extraction (store name, total, date), which led to complete iOS app with daily/weekly spending visualizations.

Cheap Flight Ticket Finder — Live Deployment | [Live](#) • [GitHub](#)

- Built full-stack flight search platform (Node.js, Express, JavaScript) integrating Amadeus Flight API with OAuth authentication and real-time data parsing, which led to demonstrated proficiency in third-party API integration and production deployment with sub-2 second response times.
- Implemented airport autocomplete (by code, city, country) and airline code resolution translating API codes to readable airline names, which led to complete user search workflow from airport selection to flight results display.

EDUCATION

Queen's University | Honours B.Comp (Software Design) | September 2022 - May 2026

Coursework: Data Structures, Algorithms, Operating Systems, Software Quality Assurance

SKILLS

Languages: Python, Swift, Java, TypeScript, JavaScript, C++, HTML, CSS • **Frameworks:** React, React Native, Node.js, Express, SwiftUI • **Tools:** Git, GitHub, Xcode, Figma, Bash • **Databases:** MySQL, PostgreSQL, SQLite
